

AI Explorers Academy

Phase 1: Introduction to Artificial Intelligence

Session Script

Session Goal

By the end of this session, students will understand that AI means **Artificial Intelligence**, that AI is a smart computer program made by people, and that AI appears in many tools they use every day.

1. Welcome and Course Introduction

Welcome everyone to **AI Explorers Academy**!

Today we are starting our AI journey together. We will learn what AI is, where we can find it, and how it helps us in daily life. There is no coding required — we are simply going to explore, think, ask questions, and have fun.

The AI Journey — Six Phases

1. Intro to AI
2. How AI Learns
3. AI Finds Patterns
4. AI Makes Predictions
5. AI in Daily Life
6. Fun Final Project

Today we focus on **Phase 1: Intro to AI**.

2. Warm-Up Questions

Let us start with some quick questions to get everyone thinking.

- Raise your hand if you used a phone today.
- Who here plays video games?
- Who uses YouTube, Spotify, TikTok, or Netflix?
- What do you think AI can do?

3. What Is AI?

AI stands for **Artificial Intelligence**.

- **Artificial** means made by humans.
- **Intelligence** means being smart or able to learn.

So, AI is a smart computer program made by people. AI is not magic — it is a tool. It learns from examples, just like we learn from practice.

A Simple Example

When you learn to recognise cats, you see many cats: big cats, small cats, white cats, orange cats, and black cats. After many examples, your brain learns what a cat looks like. AI can learn in a similar way — but instead of a brain, it uses data and examples.

Key Message

AI is a tool made by people to help people.

4. Human vs. AI

Humans and AI are not the same.

- **How they learn:** Humans learn from life, school, practice, and experience. AI learns from data and examples.
- **Feelings:** Humans can feel happy, sad, excited, or worried. AI does not have real feelings.
- **Strengths:** AI can be very fast and remember vast amounts of information. Humans bring kindness, responsibility, imagination, and judgement.

Class Discussion

Question for the Class

Should AI replace humans completely? Why or why not?

5. AI Around Us Every Day

AI is all around us. Here are some everyday examples:

- **Face ID** uses AI to recognise your face.
- **YouTube** uses AI to suggest videos you might enjoy.
- **Google Maps** uses AI to predict traffic and choose the best route.
- **Video games** use AI to control characters and opponents.

- **Voice assistants** (Siri, Alexa) use AI to understand your voice.

Class Discussion

Question for the Class

Can you think of another AI example — at home, at school, or on your phone?

6. Activity: AI Hunt Game

Now we will play a game called **AI Hunt**.

Your job is to look carefully at the picture sheet and find the objects that use AI.

Activity Instructions

1. Look carefully at all the objects on the sheet.
2. Circle anything you think uses AI.
3. Count how many AI objects you found.
4. Compare your answers with a partner.
5. Share one answer with the class.

7. Quick Recap and Closing

Today we covered the following key ideas:

- AI stands for **Artificial Intelligence**.
- AI is a smart computer program **made by people**.
- AI **learns from examples**, just like we do.
- We can find AI in phones, TVs, games, maps, video platforms, and smart devices.

Final Reflection Question

Before You Leave

What is one AI example you noticed or thought about today?
